1. What does it mean if a cell displays #####?

1 / 1 point

- ☐ You have used an invalid function name.
- ☒ The contents of the cell are too wide to display.
- ☐ The formula is trying to divide by 0.
- ☐ The formula in the cell is incorrect.

✔ **Correct**

Yes, it is correct, this generally means that the cell is not wide enough for the content.

2. What are some of the benefits of working with the **Error Checking** tool?

1 / 1 point

(One or more answers are possible. Partial credit will be awarded.)

- ☐ The tool can automatically correct any errors in formulas that occur in the spreadsheet.
- ☒ The tool provides access to supporting documentation on common errors.

✔ **Correct**

Yes, Excel provides some documentation on each of the errors it finds.

- ☒ The tool enables us to evaluate each flagged formula step-by-step.

✔ **Correct**

Yes, that's right. The feature **Show Calculation Steps** is very useful.

3. Which of the options below will help us to locate formulas with errors in a spreadsheet?

1 / 1 point

- ☒ Display formulas with errors through the **Go to Special** dialogue.
- ☐ Go to the **Review** tab and click on **Check Spelling**.
- ☐ Go to the **Formulas** tab and click on **Show Formulas**.

✔ **Correct**

Yes, that's correct. The Go to Special dialogue provides an option that displays all formulas that have errors.

4. One of the cells in your spreadsheet is showing an #N/A error. What does that mean?

1 / 1 point

- ☐ It means that you have misspelt the name of the function you used in your formula.
- ☒ It means that one of the values you used in your formula cannot be found.
- ☐ It means that you have chosen the incorrect function for the purpose of your formula.

✔ **Correct**

Yes, that's correct. The code indicates that one or more values are not available.
