1. In order to use values in other worksheets in a calculation, you must first copy them into the worksheet containing the calculation.

1 / 1 point

- ☐ True
☒ False

✓ **Correct**

Well done- you have paid excellent attention to the content of this week's video on **Calculations across Sheets**.

2. The formula `=Sheet1!A2*A2` tells Excel to:

1 / 1 point

- ☐ Apply an absolute cell reference to **A2**
☐ Put the value in **A2** in **Sheet1** into the **A2** in the current sheet
☐ Put the value in **A2** in the current sheet into **A2** in **Sheet1**
☒ Multiply the value in **A2** in **Sheet1** by the value in **A2** in the current sheet

✓ **Correct**

Well done. This was a tricky question. You have paid excellent attention to the content of this week's video on **Calculations across Sheets**.

3. When you reference cells on other sheets in a calculation you can use relative references to copy that formula to other cells.

1 / 1 point

- ☒ True
☐ False

✓ **Correct**

Yes, well done.
