[Go to next item](#)1. If cell **A1** contains the formula **=DATE(2027,3,6)** what value will be returned in cell **A1**?

1 / 1 point

- ☐ A value corresponding either to 6 March 2027 or 3 June 2027, depending upon Excel's regional settings.
- ☐ A value corresponding to the date of 3 June 2027.
- ☐ An error value because the year 2027 is outside of Excel's range for working with dates.
- ☒ A value corresponding to the date of 6 March 2027.

✔ Correct

Yes. The arguments of the **DATE** function will always be in the order of year, month, day, and so this formula will return a value representing the 6th day of the 3rd month of the year 2027.

2. If cell **A1** contains the formula **=DATE(2017,12,1)** and cell **B1** contains the formula **=TEXT(A1,"ddd")** what value will be returned in cell **B1**?

1 / 1 point

- ☐ 1, stored as text rather than stored as a value.
- ☐ Friday.

- ☐ 01, stored as text rather than stored as a value.

☒ Fri

✔ Correct

Yes. The text format **"ddd"** will return **Fri** since the date in **A1** is a Friday.

3. In the video, cell **F2** contained the text string **2014.01.21** and the cell **G2** formula **=TEXT(F2,"mmm")** was seen to return **2014.01.21** and not the value **January**. Why did the formula at cell **G2** behave this way?

1 / 1 point

- ☒ Because if the cell being referred to by the **TEXT** function is recognized by Excel as containing text, a number format of **"mmm"** specified in the **TEXT** function has no effect.
- ☐ Because cell **G2** had been formatted as a text cell before we typed the formula in there.
- ☐ Because the **TEXT** function only works when the cell it refers to is recognized by Excel as containing a number or a date. It will give an error otherwise.
- ☐ Because **"mmm"** is not a valid formatting argument to use within the **TEXT** function.

✔ Correct

Yes. The formatting argument used within the **TEXT** function is a specified number format, and will generally only have an impact on the function's result when the value being referred to is recognized by Excel as a date or number. When the value being referred to is text, this number format will have no effect.
